INTERNATIONAL PRÈLIMINARY REPORT ON PATENTABILITY

International application No. PCT/EP2004/012465

| • | Box No. I Basis | of the report |
|-----------------|--|---|
| ١. | With regard to the language, this report is based on the international application in the language in which it wa filed, unless otherwise indicated under this item. | |
| | ☐ This report is b which is the lar | ased on translations from the original language into the following language, aguage of a translation furnished for the purposes of: |
| | ☐ international search (under Rules 12.3 and 23.1(b)) ☐ publication of the international application (under Rule 12.4) ☐ international preliminary examination (under Rules 55.2 and/or 55.3) | |
| 2. | With regard to the elements* of the international application, this report is based on (replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report): | |
| | Description, Pages | |
| | 1-20 | as originally filed |
| Claims, Numbers | | |
| | 1-14 | received on 16.12.2005 with letter of 13.12.2005 |
| | Drawings, Sheets | |
| | 1/3-3/3 | as originally filed |
| | ☐ a sequence lis | sting and/or any related table(s) - see Supplemental Box Relating to Sequence Listing |
| 3 | 3. The amendment | ents have resulted in the cancellation of: |
| | ☐ the descrip☐ the claims | |
| • | the drawin | gs, sheets/īigs |
| | ☐ the seque | nce listing (specify): s) related to sequence listing (specify): |
| • | This report hat had not been made Supplemental Box | as been established as if (some of) the amendments annexed to this report and listed below le, since they have been considered to go beyond the disclosure as filed, as indicated in the α (Rule 70.2(c)). |
| | ☐ the seque | |
| | · · | applies, some or all of these sheets may be marked "superseded." |

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N) Yes: Claims 1-14

No: Claims

Inventive step (IS) Yes: Claims 1-14

No: Claims

Industrial applicability (IA) Yes: Claims 1-14

No: Claims

2. Citations and explanations (Rule 70.7):

International application No.

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY (SEPARATE SHEET)

PCT/EP2004/012465

WO-A-98/55333 (D1), which is cited in the present application discloses a security document according to the preamble of claim 1, wherein it shall also be considered that bank notes in general and in particular in this cited prior art contain not only one but several different security elements as forgery protection.

The subject-matter of claim 1 differs from the known prior art substantially in that first and second security elements are respectively provided on first and second constituting parts of the security document and that the first and second security elements have same identifiable properties and are provided on the document to be comparable. Further, said elements being of the kind as defined in the characterizing part of claim 1.

Claim 1 is therefore novel.

The problem to be solved by the features of claim 1 is to improve forgery security by easy detectable combined security features.

Neither D1 nor any of the other cited documents nor a combination of their teachings suggest a security document with the combination of features of claim 1 in order to solve the problem posed.

Thus, claim 1 involves an inventive step.

Accordingly also a method of producing said document according to independent claim 10 is novel and involves an inventive step.

Claims 1 and 10, as well as their respective dependent claims 2-9 and 11-14 meet the requirements of Article 33(1)-(4) PCT.

PSIC082WO / 26.09.05

PSIC082WO-0500616

Amended Claims

 Security document comprising a substrate (P) as a first constituting part and at least another constituting part (1,2,3)

and a first security element (S) being applied to or comprised in one of the constituting parts (P,1,2,3), said security element (S) having identifiable properties, the presence of said properties serving as a first authenticating feature for said security document,

characterized in that

at least a further security element (S) having substantially the same identifiable properties is applied to or comprised in at least another of the constituting parts (P,1,2,3) as a second security feature,

said security elements (S) are chosen from the group consisting of optically variable pigments, multi-layer thin-film interference pigments, liquid-crystal pigments, holographic pigments, interference-coated particles, thermochromic pigments, photochromic pigments, luminescent compounds, infrared-absorbing compounds, UV-absorbing compounds, magnetic compounds, micro-engraved or micro-textured flake pigments, and forensic marking compounds,

and in that said security elements (S) are applied or added to the constituting parts (P,1,2,3) in a manner to allow a comparison of their properties as a third security feature.

 Security document according to claim 1, characterized in that the first and the further security elements are materially the same.

PSIC082WO / 26.09.05

PSIC082WO-0500616

- 3. Security document according to claim 1 or 2, characterized in that the security document is a banknote, a value paper, an identification document, an access card, a security label or a packaging.
- 4. Security document according to one of the claims 1 3, characterized in that the substrate (P) is chosen from the group consisting of papers, cardboards, textiles, foils, printing layers and polymer sheets.
- 5. Security document according to one of the claims 1 4, characterized in that the other constituting parts (1,2,3) are chosen from the group consisting of printing inks, security threads, windows, fibers, planchettes, foils and decals.
- Security document according to one of the claims 1 5, characterized in that at least one of said security elements
 (S) is contained in an ink or coating.
- Security document according to one of the claims 1 6, characterized in that at least one of said security elements (S) is contained in or applied to the substrate (P) or one of the constituents thereof.
- 8. Security document according to one of the claims 1 7, characterized in that said substrate (P) comprises a structure of alternating polymer and coating layers.
- 9. Security document according to one of the claims 1 8, characterized in that said security elements are chosen from the group comprising covert security elements.

10. Method for producing a security document comprising a substrate (P) as a first constituting part and at least another constituting part (1,2,3)

by applying or adding a first security element (S) to one of the constituting parts (P,1,2,3),

said security element (S) having identifiable properties, the presence of said properties serving as a first authenticating feature for said security document,

by applying or adding at least a further security element.

(S) having substantially the same properties to another of the constituting parts (P,1,2,3) as a second security feature,

characterized in that the first and the further security elements (S) are chosen from the group comprising optically variable pigments, multi-layer thin-film interference pigments, liquid-crystal pigments, holographic pigments, interference-coated particles, thermochromic pigments, photochromic pigments, luminescent compounds, infrared-absorbing compounds, UV-absorbing compounds, magnetic compounds, microengraved or micro-textured flake pigments, and forensic marking compounds,

and in that said security elements (S) are applied or added to the constituting parts (P,1,2,3) in a manner to allow a comparison of their properties as a third security feature.

- 11. Method according to claim 10, characterized by applying or adding materially the same security element (S) to two or more different constituting parts (P) of the security document.
- 12. Method according to claim 10 or 11, characterized in that at least one of said security elements (S) is applied to a constituting part (P,1,2,3) by a coating or printing procedure.

PSIC082WO / 26.09.05

4

PSIC082WO-0500616

- 13. The use of a first and at least a further security element (S) having substantially the same properties in or on at least two different constituting parts (P,1,2,3) of a security document.
- 14. The use of a first and at least a further security element (S) according to claim 14, characterized in that the first and the further security elements are materially the same.
